

Gas Charging Equipment

Lighter, newer and easier to order

In order to maintain KALLER market leader position the gas charging equipment has been updated. See updated catalog pages 17.2-17.3 (see digital version on KALLER website)

Features and benefits

- Safer pressure management when charging
- Easier nitrogen gas charging and evacuation with a lighter Control Armature
- New pressure regulator maintaining higher pressures and enabling better ergonomics
- Easy to order, updated information available in catalog pages and spare part list
- New Carry case

Availability

The updated gas charging equipment is available to order from January 08, 2018.
(Old version available to order until January 31, 2018.)

Control armature M6

The Control Armature M6 gets an additional G1/4" port (pos. 1). The control armature block is made of aluminum, which reduces the weight.

Also the bleeding function is improved.

Pos. 1

Pressure regulator

The KALLER Pressure Regulator will now be replaced with a new model.

Features and benefits

Safer pressure management when charging

A more accurate gauge for an increased pressure range
(from 206 bar for the old one to 414 bar for the new one)

Easier to set pressure with a knob

Safer Gas Charging

To avoid overcharging and to keep a constant level of the charging pressure a pressure regulator always has to be used. Therefore the charging hose connected direct to the gas bottle (pos. 1), with no pressure regulator, is obsoleted.
