

EZ Hose updates

Reduced risk of leakage

– easier to secure hose by hand

EZ Hose features and benefits:

- Easier to secure the hose onto the adapter by hand
- Reduced risk of leakage due to vibration safe hose connection
- No tool needed to secure hose ends

Why does KALLER update EZ Hose?

The zinc layer on the threads was uneven, sometimes making it difficult to secure the hose ends. Once in a while the adaptor threads were damaged during transport or handling. It has also been noted that the hose ends in some cases were not resistant to vibrations. In addition, the yellow cap is not necessary to use on non-valve adapters.

This is the new solution

The adapter is now made of stainless steel (A) instead of the uneven zinc-plated steel. The yellow cap on the adapter is replaced by two soft plastic caps (B). The hose end will lock around the O-ring onto the adapter (C).

Scheduled for delivery

4014973-G1/4	Adapter EZ hose G1/4"	Q1 2016
4114973-G1/8	Adapter EZ hose G1/8"	Q4 2015
