2. When you've found the product you're looking for, click "Add to quote" and then "Show cart"

The TEBT counterbalance cylinders are cylinders with an ear (with spherical plain bearing) on the tube and an attachment thread in the top of the piston rod and stroke length up till 300mm.

The cylinders are for counterbalance or if a holding force is needed, in various type of applications. The cylinders should always be built in and fixed both at the tube and piston rod side.

Note! The gas springs are not to be exposed to any pulling forces. If needed a mechanical stop must be installed to prevent this from happening.
